

# Sprint Closure Messaging Module Test Plan

Comprehensive evaluation protocol & task matrix for production launch

|                |                  |                |               |
|----------------|------------------|----------------|---------------|
| PROJECT NAME   | SPRINT TARGET    | DATE GENERATED | QA LEAD       |
| Glunity Mobile | Sprint 1 Closing | June 19, 2026  | Yassine Drira |

## 1. Objective & QA Scope

The objective of this testing matrix is to achieve 100% QA sign-off on the core messaging module. This ensures real-time reliability, media processing compatibility, correct channel rendering contexts, and mobile resource efficiency. Testing runs concurrently across three distinct layers:

## 2. Feature Assignment Matrix

| TESTER  | MODULE AREAS                          | VERIFICATION FOCUS                                                                      |
|---------|---------------------------------------|-----------------------------------------------------------------------------------------|
| Rayne   | Sockets, Presence, & Real-Time Sync   | Auto-reconnection logic, typing events, active status dots, inline message deletion.    |
| Islam   | Voice Messages, Media uploads & Cache | Audio permission handler, Cloudinary file uploads, offline SQLite/AsyncStorage loading. |
| Yassine | Header Logic, Channels & Layout UI    | Uppercase 'DM' channel context, partner profile details fetched, 75% bubble alignment.  |

All blockers found during testing should be compiled in the project's repository issue tracker and labeled with [Messaging-QA] prior to the daily review.

### 3. Team Member Task Cards

Print or distribute these cards directly to team members. Each contains checkboxes indicating the core criteria to evaluate:

#### Task Card: Rayne (Sockets & Presence)

Assigned

- ☐ **Offline States:** Disconnect connection during an active chat. Verify that the orange reconnect banner appears.
- ☐ **Auto-reconnect Sync:** Turn connection back on and confirm that incoming messages queue in chronological order.
- ☐ **Typing States:** Verify "typing..." appears under the header name when the peer starts typing and clears instantly when they stop or send.
- ☐ **Message Actions:** Test real-time message editing updates, pinning messages, and deleting messages (must show inline "Message deleted" placeholder).

#### Task Card: Islam (Media, Audio & Caching)

Assigned

- ☐ **Hardware Access:** Verify camera, microphone, and gallery permission dialogs trigger on new install.
- ☐ **Voice Notes:** Record a voice clip, test the cancel (trash bin) button, and play back the audio (checking the timer progress indicator).
- ☐ **Media Uploads:** Send image and video attachments. Ensure they upload successfully to Cloudinary and display without errors.
- ☐ **Cache Sync:** Reopen the app offline. Verify that the local cache immediately renders channel history and messages.

#### Task Card: Yassine (Header, Channels & Layout)

Assigned

- ☐ **DM Identity:** Confirm DMs are identified correctly (supporting the uppercase 'DM' database type) and display real partner profile details.
- ☐ **Profile sheet redirect:** Confirm that clicking on the DM header or partner avatar launches their profile bottom sheet rather than group members list.
- ☐ **Symmetry & Width:** Ensure long messages wrap correctly within bubbles, occupying at most 75% of screen width to leave professional empty space.

**Scroll indicator:** Ensure the float-to-bottom arrow button behavior works smoothly and clears unread badges.
